

We remove existing cost — not add a system.

A cost-reduction & credit-loss-prevention programme for AFFIN Bank, sized on AFFIN's own baseline data.

Existing cost removed

+

Avoidable credit loss

—

Implementation cost

=

Net benefit

THE MESSAGE

Rather than layer a new platform on top of every existing task, we convert full manual checking into exception-driven checking — reducing routine site inspections, turning emergency repairs into planned maintenance, optimising ATM & vendor cost, and catching over-drawdowns earlier. Every figure is computed on AFFIN's own anonymised data; nothing scales until the bank confirms net benefit is positive.

TRACK A · OPERATING COST

Hard savings you can bank

- Emergency repairs → planned maintenance
- ATM downtime & replenishment routing
- HVAC over-run and inefficient equipment
- Duplicate vendors, price variance, double billing

TRACK B · CREDIT LOSS

Losses caught earlier

- Drawdowns released ahead of physical progress
- Stalled projects detected months late
- Fund diversion & progress–payment mismatch
- Collateral erosion tracked continuously

Commercial Go/No-Go gate

No large-scale roll-out until AFFIN confirms net benefit is positive and the Benefit-to-Cost Ratio clears a jointly-agreed hurdle.

B1 · CONSTRUCTION FINANCE ASSURANCE

WATCH

Drawdown vs physical progress

19-point gap — drawdown is ahead of physical works. The system holds release pending an exception site visit; no committee authority is bypassed. We augment human judgement, never replace it.

The ask

1

Discovery Workshop

Ops, Finance, Corporate Banking, Credit, Risk & Technology pick one A-track and one B1 pilot.

2

Name the owners

Executive sponsor, B1 business owner, and risk owner.

3

Share baseline data

Inspection counts, ATM & energy bills, vendor contracts, drawdown data.

4

Fix two pilot dates

A 10–15 branch A-pilot and a 3–5 project B1 Shadow-Mode pilot, each Day-90.

Evidence discipline: comparable-market case results are Partner-Provided and Pending Independent Verification, shown for capability reference only. Public AFFIN facts are drawn from AFFIN Group's public profile. All value figures are generated from AFFIN's own baseline inputs — no result is presented as achieved until verified.
